DPD-2343-59  
 Copy 4 of 5  
 8 April 1959

MEMORANDUM FOR: Col. Burke, Acting Chief, DPD-DD/P  
 25X1A      THROUGH : [REDACTED] Chief, Material Branch  
 SUBJECT : P2V7 Program

25X1A

1. In accordance with your request of 1 April 1959, [REDACTED] and I have discussed the manner in which we each feel the P2V7 program should be handled.

2. a. We both agree that Material should be responsible for normal material matters; i.e., procurement of technical representatives, procurement and handling of supplies, ascertaining that adequate maintenance is accomplished, etc.

b. I believe that we differ on one primary point. I feel that there should be one central coordination point for all of the P2V7 matters except operational aspects of training and missions. [REDACTED] feels that adequate coordination can be achieved by the distribution of information copies of correspondence.

25X1A

c. I believe this coordination point is necessary since we are dealing with a small number of airplanes and the development and material functions overlap. Unless one coordinating point is established I am afraid that we will find ourselves issuing conflicting instructions to contractors and others with whom we do business. I do not mean that the conflicting instructions are intentional, but signals do get crossed, even with the best of coordination. I do not recommend that the coordinator make all the decisions; material should make material decisions, development should make development decisions, etc., however, the coordinator should insure that someone is carrying the ball on each aspect and that others with related business are kept informed and a coordinated program conducted.
